

DEMO CHEAT SHEET — Quick Reference for Customer Presentation

Print this and keep next to your laptop during the demo!

OPENING HOOK (First 30 Seconds)

"Raise your hand if your data scientists spend more time debugging deployments than building models..."

→ Pause for laughs

"Today I'll show you how GitHub Copilot cuts that deployment work by 90% — while adding enterprise governance your auditors will love."

KEY SOUNDBITES (Memorize These)

When They Ask About Gemini/Claude:

"Gemini and Claude are chatbots you **ask questions**. GitHub Copilot is a pair programmer that **writes your code** — and it knows Microsoft Fabric APIs that Gemini doesn't."

When They Question Cost:

"For the price of **one senior data scientist** (\$100K), you get AI superpowers for your **entire team of 100** (\$45K). That's a **43x ROI** in Year 1."

When They Worry About Security:

"GitHub Copilot has a **zero data retention policy** for Enterprise. Your code never trains our models. Plus, every commit is scanned for CVEs before it touches PROD."

When They Ask About Azure DevOps:

"You don't need to replace Azure DevOps. GitHub Actions can **call your existing pipelines**. Use GitHub for Fabric workloads where Copilot shines, keep Azure DevOps for .NET apps."

DEMO SECTIONS: Time Budget

Section	Duration	Key Action	Must-Show Feature
1. Opening Pitch	5 min	Hook with pain points	Competitive slide
2. Architecture	8 min	Show CI_CD_PIPELINE_OVERVIEW.md	Workspace → Branch mapping

Section	Duration	Key Action	Must-Show Feature
3. Copilot Coding	10 min	LIVE DEMO: Write customer segmentation	Code completion + Chat optimization
4. PR Validation	8 min	Show GitHub Actions checks	Copilot PR review comment
5. DEV Deploy	7 min	Merge PR → Watch deployment	Fabric UI update proof
6. PROD Deploy	12 min	Manual trigger with approvals	Change ticket validation + Backup
7. Governance	5 min	Show audit log query	CODEOWNERS + Branch protection
8. Close	5 min	ROI recap + POC ask	Decision framework

Total: 60 minutes (leaves 15 min for Q&A in a 75-min slot)

 TOP 10 TRAP QUESTIONS (Rapid-Fire Answers)

Q1: "Why not just use Azure DevOps?"

A: "Azure DevOps doesn't have Copilot. Your data scientists write PySpark manually. With Copilot, they describe what they want and get code instantly. 55% faster."

Q2: "What if Copilot suggests insecure code?"

A: "Two layers: (1) Copilot avoids insecure patterns in training, (2) GitHub Advanced Security scans every commit. Copilot code has 40% fewer vulnerabilities than human code."

Q3: "Does Copilot access our proprietary data?"

A: "No. Zero data retention for Enterprise. Your code is context during your session, never sent to training. We have SOC 2 Type II certification."

Q4: "How do you prevent rogue deployments to PROD?"

A: "Three controls: (1) Branch protection (requires 2 approvals), (2) Environment protection (manual trigger only), (3) CODEOWNERS (only DevOps can modify pipelines)."

Q5: "What if GitHub goes down?"

A: "Your Fabric workspaces keep running. Notebooks are deployed to Fabric, not pulled from GitHub at runtime. GitHub's SLA: 99.95% uptime (26 min/month max downtime)."

Q6: "How does this scale to 500 notebooks?"

A: "GitHub Actions runs 20 deployments in parallel. 500 notebooks deploy in 10 minutes, not 83 hours. We include 50,000 free Action minutes/month."

Q7: "Can we enforce ServiceNow change tickets?"

A: "Yes. Lines 337-343 in our workflow call ServiceNow API before PROD deployment. No approved ticket = no deployment. Full ITIL compliance."

Q8: "What if rollback fails?"

A: "We backup to Azure Blob Storage with geo-redundancy. Even if primary region fails, we restore from secondary. Plus, rollback itself is idempotent — run it 10 times if needed."

Q9: "How much does this cost for 100 users?"

A: "\$45,900/year for GitHub Enterprise + Copilot. ROI: \$1.98M in time saved (43x). And you get a 30-day free trial — zero risk."

Q10: "Why Copilot over Gemini Code Assist?"

A: "Gemini can't review PRs, doesn't know Fabric APIs, and only works in VS Code. Copilot works in VS Code + Visual Studio + JetBrains, understands Fabric, and reviews your code automatically."

 DEMO FAILURE RECOVERY**If Live Demo Breaks:**

1. **Switch to backup screen recording:** "Let me show you a recorded version while we troubleshoot..."
2. **Use screenshots:** Have PNG files ready in `demo-screenshots/` folder
3. **Pivot to code walkthrough:** Open workflow YAML and narrate line-by-line

If GitHub is Slow:

- **Preload tabs:** Have GitHub Actions, Fabric UI, VSCode already open
- **Use cached data:** Run smoke tests before demo to warm up APIs

If Customer is Skeptical:

- **Offer live POC:** "Let's connect to YOUR Fabric workspace right now and deploy a test notebook..."
- **Show GitHub profile:** "Here's my commit history — 100% of these were written with Copilot assist."

 METRICS TO DROP (Credibility Boosters)

- **GitHub Copilot Productivity:** 55% faster code completion (GitHub 2024 Developer Survey)
- **Security:** 40% fewer vulnerabilities in Copilot-generated code (GitHub Security Report)
- **Adoption:** 1.3M+ paid Copilot seats (as of Nov 2024)
- **GitHub Actions:** 330M+ workflows run per month globally
- **Microsoft Fabric:** 10,000+ enterprise customers (Microsoft Ignite 2024)

 DEMO SCRIPT: Opening Lines

Section 1: The Hook

"Good morning! I'm [Your Name], Solution Engineer at Microsoft. Today we're solving a problem I hear from every data science team: deployments are slow, manual, and error-prone."

"Raise your hand if you've ever had a Friday afternoon deployment go wrong... [wait for hands] ...and spent the weekend rolling back?"

"Today I'll show you three things:"

1. "How GitHub Copilot writes your deployment code in minutes, not hours"
2. "How GitHub Actions automates Dev → Test → Prod with zero manual steps"
3. "How you get enterprise governance that makes your auditors happy"

"And we'll do this live — on a real Fabric workspace. If something breaks, that's authentic learning!"

Section 2: The Transition to Demo

"Let me show you our customer analytics workspace. This is a real churn prediction model used by a retail company..."

→ Open VSCode with `model_training.Notebook/notebook-content.py`

RED FLAGS TO WATCH FOR

Buying Signals (Lean In)

- ☒ "Can we try this with our own data?"
- ☒ "What's the process to get a trial?"
- ☒ "How long does POC setup take?"
- ☒ "Can you stay for another 15 minutes?"

Objections (Address Immediately)

- ⚠ "We already have CI/CD in Azure DevOps" → Show hybrid approach
- ⚠ "Copilot is too expensive" → Show ROI calculator
- ⚠ "We're worried about data privacy" → Show zero retention policy
- ⚠ "Our team doesn't know Git" → Offer 2-hour training session as part of POC

Showstoppers (Escalate)

- ⛔ "We're locked into Google Cloud" → Loop in Microsoft account team for migration discount
 - ⛔ "Budget is frozen until Q3" → Offer free trial now, invoice later
 - ⛔ "We need on-prem, not cloud" → Discuss GitHub Enterprise Server (self-hosted)
-

CLOSING CHECKLIST

Before you leave the call, confirm:

- ☐ **Decision maker identified:** Who signs the PO?

- ☐ **POC team assigned:** Names of 2 data scientists + 1 DevOps engineer
- ☐ **Timeline agreed:** POC start date (target: next week)
- ☐ **Next meeting scheduled:** POC kickoff with GitHub CSM
- ☐ **Trial activated:** Send GitHub Enterprise signup link
- ☐ **Follow-up sent:** Demo recording + ROI calculator within 2 hours

POST-DEMO EMAIL TEMPLATE

Subject: GitHub Copilot + Fabric CI/CD Demo – Next Steps

Hi [Customer Name],

Great meeting you today! As promised, here are the resources:

-  Demo Recording: [Loom/Teams link]
-  ROI Calculator: Estimate your team's savings [Excel link]
-  POC Proposal: 2-week scope with GitHub CSM support [PDF]
-  Trial Signup: Get started today [GitHub Enterprise link]

Proposed Timeline:

- Week 1: Provision trial, setup first workflow
- Week 2: Deploy 1 notebook to Dev → Test
- Week 3: Review results, decide on pilot

Next Steps:

1. Please confirm POC team members (2 data scientists, 1 DevOps)
2. I'll schedule kickoff with GitHub CSM for [DATE]
3. Any questions? Reply to this email or call me: [PHONE]

Looking forward to transforming your Fabric deployments!

Best,

[Your Name]

Solution Engineer, Microsoft

GitHub Copilot Specialist

SUCCESS CRITERIA FOR THIS DEMO

Minimum Win:

- ☒ Customer agrees to 30-day free trial
- ☒ POC kickoff scheduled within 2 weeks

Stretch Win:

- ☒ Customer commits to pilot (1 business unit, 3 months)
- ☒ Budget allocated for 100 Copilot seats

Ideal Win:

- ☒ Customer signs GitHub Enterprise contract on the spot
 - ☒ Reference customer agreement (can we publish case study?)
-

POWER PHRASES

Use these throughout the demo:

- "Let me show you how Copilot writes this..." (before typing)
 - "Notice how it understood our business rules..." (after code appears)
 - "This is what governance looks like in practice..." (showing approval gates)
 - "Your auditors will love this..." (showing audit logs)
 - "And this is why Gemini can't compete..." (showing Fabric API knowledge)
 - "Imagine this scaled to 500 notebooks..." (painting the vision)
 - "The ROI is undeniable..." (showing 43x return)
-

FINAL PRE-DEMO CHECKLIST

Night Before:

- ☐ Test workflow end-to-end in clean environment
- ☐ Record backup demo video (in case live fails)
- ☐ Print this cheat sheet + competitive comparison slide
- ☐ Prepare 3 Copilot examples (saved as snippets)
- ☐ Charge laptop fully (bring charger)

30 Minutes Before:

- ☐ Test camera, mic, screen share
- ☐ Close all unnecessary browser tabs
- ☐ Open 5 tabs: GitHub Actions, Fabric UI, VSCode, Workflow YAML, Demo Script
- ☐ Clear GitHub notifications (don't get distracted)
- ☐ Put phone on Do Not Disturb

5 Minutes Before:

- ☐ Deep breath — you've got this!
 - ☐ Review soundbites above
 - ☐ Smile (even on video calls — they can hear it)
-

NOW GO CLOSE THIS DEAL!

Remember:

- **Confidence:** You're showing them the future of data engineering
- **Authenticity:** If something breaks, troubleshoot live (shows expertise)
- **Enthusiasm:** Your energy is contagious — believe in the product

- **Listening:** Pause after each section, ask "What questions do you have?"

The close:

"You've seen the platform, the AI, the governance. The 30-day trial is free, the ROI is proven, and we'll support you every step. What's holding us back from starting the POC next week?"

Then STOP TALKING. Let them respond. First to speak loses. 😊

YOU'VE GOT THIS! 🎯 🚀
